

Solution:

```
import java.util.Scanner;
class MaxDiv {
    public static void main(String[] args) {
        Scanner sc= new Scanner(System.in);
        int max_div=0;
        int max_div_num= -1;

        while(true){
            String s= sc.next();
            if (s.equals("Done")){
                break;
            }
            int n= Integer.parseInt(s);
            int div=0;
            for (int i=1; i<=n; i++){
                if (n%i==0){
                    div++;
                }
            }

            if (div>max_div){
                max_div= div;
                max_div_num= n;
            }
        }

        System.out.println(max_div_num);
    }
}
```
