CSE111: PROGRAMMING LANGUAGE II Summer 2024 Quiz1 Marks: 10

Name:	ID:	Section:
-------	-----	----------

Question 1: Write a Java program that keeps on taking inputs from the user until the user inputs "Done". Your program should print the number that has the maximum number of divisors among all the numbers that were given by the user. You have to use the `.equals()` method for checking whether the user has provided "Done" or not. If two numbers have the same number of divisors, the latest number must be picked. Assume that the user will only input positive integers as the numbers. **[10]**

Sample Input 1: 5 16 12 28 36 Done	Sample Output 1: 36
Explanation Among all the numbers input by the user, 36 has the most number of divisors. It has 9 divisors (1, 2, 3, 4, 6, 9, 12, 18, 36).	

Sample Input 2: 8 24 30 Done	Sample Output 2: 30
Explanation 24 and 30 had the most number of divisors. Both 24 and 30 have 8 divisors. Since, 30 was the latest input, 30 was printed.	

Sample Input 3: Done	Sample Output 3: -1
Explanation The user input "Done" without giving any number input. Therefore, -1 was printed as an invalid value.
