

Assignment 2 on Computer Ethics

Answer to the Question No – 1

- No, the action is not ethical.

- Consequentialist Perspective:

This theory looks at the result of the action.

Here in this scenario after sharing LMS and Wi-Fi credentials, the other students are facing hassle during exam. Therefore, as this action causes harm to many students this is not ethical.

- Deontological Perspective:

This theory focuses on rules.

Sharing those credentials are generally prohibited by the university rules.

As this action contradicts those rules, it is an unethical action.

- The person who shared and the outsider who used it later both hold responsible.

However, if the person had not shared the credentials at the first place nothing would have happened. Therefore, the sharer is at more guilt.

Answer to the Question No – 2

- No, this is not an ethical behavior even if it possesses no harm.
- Violated ethical principle is Respect for people.
- No, “no damage done” does not justify the action. Because according to deontological view the action itself is wrong.

Answer to the Question No – 3

- The argument is not valid. Because initially, the software being expensive does not justify using cracked version. Secondly, most of the people’s doing does not make a wrong action right. Lastly, even if the intension is only for learning but it does not bring justice to the owner.
- No, something being common does not necessarily means it is ethical.
- Property Right:

This action violates property rights because the software is owned by its creators. Using cracked version means using without owner’s permission and consent.

- Professional Integrity:

This action also violates professional integrity because it does not maintain honesty and fairness.

Answer to the Question No – 4

- The student is not fully responsible. Because he did not done harm intentionally.

However, he is partially responsible because of his carelessness.

- This can be a mistake because he was not aware of the harm. But it also indicates lack of responsibility.

- The user has responsibilities of being cautious, avoid clicking suspicious mails or links and reporting the authority about suspicious activities.
