OTT Platforms Promote Violence and Vulgarities Among Youth Minds

The increases in violence and abusive language in OTT programs raises a questions about whether their claims fore delivering the stony are Conned on whether they are harming young people's mind (The Social Digest, 2029). As OTT platforms popularity growing Services like Netflix, Prime Video and others, more teenagers or young people are being used to the content which including vulgar language, graphic violence and disturbing behaviour. Research has shown that interaction with this type of content may desensitize viewers and increase the chance of aggressive and risky behaviours (Anderson & Dill. 2000). As have a result, mast platforms of content very open age restriction, allowing a decent view of many improper things for a youny mind and raising many questions about long term effects on the personality development. Most platforms fail to carry out effective age verification procedures, allowing children and teeragons to avoid any restrictions and access potentially harmful content. As a result, unwanted behaviour is like aggression, vulgarity and dishonesty became normalised and young brains accept them in real life. This may influence their approach to argue about decision, social interactions and general emotional development. Therefore, OTT platforms make violence and vulgarity look like normal to the youngers by not having proper age restriction, Streaming shows filled with improper language and violent content and portray negative characteristics as ideology which affects young minds and thoughts and acts.

To begin with, anti-heroes or negative icons are highly glorified on the OTT platform, creating deep influences on the youth's behavior. Characters like villains, and criminals are sometimes given prominent role, with which youths can relate. At some points they become aspiration for them. Their intelligent, charming, commanding things cover the lines of morality for viewers. For instance, studies indicate that most OTT platforms have made the villain intelligent and powerful. From Shubh Joshi in *Asur* to Hathoda Tyagi in *Paatal Lok*, characters are portrayed as if criminality has become aspirational for the youth (Shahin, Khan, & Pal, 2023). This trend makes certain behavior which normally are violative and manipulative look like normal, cool and worth following. Youngers keep following them which results in distortion of their ability to distinguish between right and wrong. They imitate these characters and relate them in their own social behaviors and in decisions making. The normalization of the worst behaviors, and in some cases, celebrating them happen because of the youth's consumption of these unethical manipulative, aggressive, and crime glorifying contents. Moreover, real-life incidents also point out the negative effects of such portrayal. The case of Nikita Tomar's murder at the hands of Tausif, who claimed to have been inspired by Munna Bhaiya of *Mirzapur* series. This revealed how fictional characters are influencing the vulnerable to dangerous behavior (Badwe & Nesrikar, 2022). The above incident underlines the dire need for regulatory mechanisms so that such tragic consequences could be avoided. The trend of negative role modeling, which is getting glamorized through OTT platforms making the youths think that this is what normal is. To sum up, the glorification of these rouge characters done by OTT platforms are destroying the mindset of youngers and inspiring them in doing awful things.

OTT platforms are increasingly filled with improper language and violent content, exposing young viewers to harmful material that can negatively influence their behavior and

mindset. This unregulated exposure can shape young minds in concerning ways, making it essential to examine. One major concern is the influence on society as many streaming shows portray violence as a solution to problems. On some shows they glorify violence which is appealing to youth. So if it gets normalized to the youth it will be very bad for society. The study looks into 25 review papers published between 2017 and 2024 and finds that OTT platforms have a major negative influence on human society(Nanda,2024). So if it gets normalized violence will seem less severe.another significant issue is using proper language and promoting vulgarity which destroys moral values. Among young audiences many series show abuse and disrespect frequently. OTT platforms are increasingly filled with improper language and violent content, exposing young viewers to harmful material that can negatively influence their behavior and mindset. This unregulated exposure can shape young minds in concerning ways, making it essential to examine. One major concern is the influence on society as many streaming shows portray violence as a solution to problems. On some shows they glorify violence which is appealing to youth. So if it gets normalized to the youth it will be very bad for society. The study looks into 25 review papers published between 2017 and 2024 and finds that OTT platforms have a major negative influence on human society(Nanda,2024). So if it gets normalized violence will seem less severe.another significant issue is using proper language and promoting vulgarity which destroys moral values. Among young audiences many series show abuse and disrespect frequently. As young viewers lack maturity they will mimic this behavior in real life. This will hamper their communication and will reduce respect for elders for example, popular TV series often use vulgar language as a tool which portrays it as a part of regular conversation, an article in the social digest shows that excessive usage of vulgar language and behavior in OTT shows normalizes such acts, affecting real life conduct (The Social Digest, 2024). In conclusion, the unrestricted acts on OTT platforms have harmful effects on the viewers by normalizing such

acts. As OTT platforms continue to dominate entertainment consumption, stricter content regulations and effective parental supervision are necessary to ensure young minds are protected from harmful influences.

In today's generation, OTT platforms have a great impact on young adults. Excessive exposure causes a huge impact on a person's mental and social well-being. People are more into internet and social media which creates a habit for them and this results in increasing the screen time. Excessive screen time leads to a greater level of anxiety and depression. Meanwhile, they get attracted to drugs to get rid of it. According to an article, 42.9% of the people become anxious while watching graphics applications and intense contents Jain and associates (2023). These types of content exposure makes these individuals scroll through the media all day. It is becoming a prevalent toy in this century compared to the previous century. Secondly, if we can recall the pandemic times, youth were more attracted to online games like Call of Duty, PUBG and Freefires, while study was stopped for a certain period of time, these youth lost their capability to interact with the outside world. OTT platforms include violence, abusive behaviour or profane languages. It changes a viewer's perceptions and behaviours. Wagh et al (2022) research pointed out that such portrayal of contents might lead young viewers to become aggressive and a sign of harmful substances. In conclusion, OTT platforms have a wide collection of contents but their impact on young viewer's mental health is significant. So we should take some steps to minimize these problems to reach a balance approach. We should get ourselves involved in physical activities rather than spending time on social OTT platforms.

Of course, OTT platforms receive backlash for allowing content with obscenity and violence, and here, fans are also often overruactivated, while democratic aspects such as freedom and responsibility of spectators are reduced. OTT platforms are much closer to the original movie theater instead of TV channels because they use an active choice model that means that the viewer consciously decides what content they want to watch. Thus in pure words, the OTT platforms provides the audience disclaimers, age restrictions and disclaimers for innocence as well as involve parental control to save the youth's vulnerable mind (Creative First, 2024). Unlike the to control of government, these focuses gives guardians the controls over what their children watch and play rather than someone else do this for them. However, opponents of strict content regulation note that terms such as 'vulgar' of 'obscene' are somewhat subjective and ambiguous, opening down to inconsistent enforcement. (Brut Times, 2024) . Such type of moral policing does endanger progressive materials and can stop diverse voices from being heard. Again the OTT platforms follows the self regulatory systems to balance creativity with responsibility. As Brut Times (2024) explains these platforms have the systems that are able to address complaints and remove contents when necessaary. Thus it reduces the need for the government heavy control. Again too much interference can lead to the limitations in the freedom of artist and stop smaller content graders from sharing their ideas. As creative times in bracket 2024 states that focusing on empowering users through tools such as age rating mechanisms and content filtering can raise concerns about the wrong or inappropriate content more effectively that blank censorship. Now raising concerns about media and promoting media literacy won't restrict creative freedom of content creators. In conclusion, the OTT platforms enable people space where they are able to express their artistic free, diverse storytelling and creative ideas but overregulating these platforms will limit, reduce content choices and heart theartist as stated before. Rather than censorship, using tools like age filter, media literacy improvement and

families to monitor on the content should be focused on more. Thus in this way, we can protect young viewers while allowing them to share stories the challenge, educates and entertain through OTT platforms.

Thus, it is clear that over-the-top (OTT) platforms is responsible to promote violence and vulgarity among young minds. The platform have not taken enough necessary steps to keep safe young viewers from harmful content and often glorify bad behaviour and represent them as something to admire. As a result, young viewers start to see violence as a normal thing, which can destroy their behavior and thinking (Stone, 2022; Mehell 2023). To fix this, the first and foremost thing they can do is create a better age verification system. As a result, minors won't be able to access those content which meant for adults. Besides, they should also focus on parents about how to use tools to monitor and control what their children watch. Thus parents can play a great role to keep away their children from harmful content. They should also improve the label and warn about the inappropriate content. Strong filters and clear warning about violent or explicit material can help parents & viewers make better choices about what to watch (clarkson, 2021; Hall, 2022). If these steps aren't made, these platforms will continue to harm young audiences by those content that promotes violence, bad language and unhealthy behaviour. This could lead to a generation that will suffer with both emotional and social development. They need to find a balance between allowing creative freedom and socially responsible. By taking these steps, OTT platforms can help to protect the mental and moral growth of the next generation (Richards, 2022; Hughes, 2021).
